# SPRING IS HOTTING UP!

*ARTSOUND is launching a new series of products in new segments*

## **Smart solutions in active audio (available from March)**

With the launch of no fewer than four new models of inwall loudspeakers, leading specialist ArtSound has found yet another new niche in the market. Two round, one square and one rectangular model (Flat or Happi range) have entered the limelight.

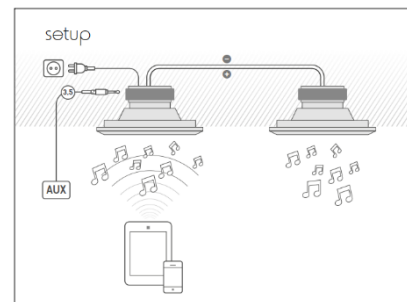

Inwall speakers will never be the same again.

Thanks to the in-built class D amplifier, any room can be turned into a musical oasis of its own.

You can connect up to any source as part of a wireless network. Thanks to the Bluetooth® function, you can stream any playlist or radio

station. The patented drivers offer an unprecedented sound quality, for an ultimate listening experience of absolute purity. There are four new models in all, each with the following features:

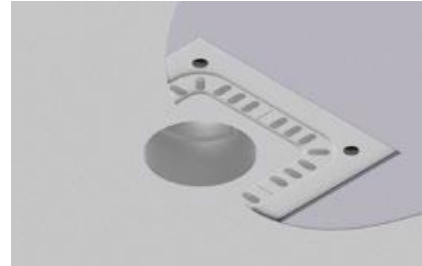

- Set of active + passive loudspeakers
- 2x 45W RMS, class D
- Aux-in with auto-off
- Bluetooth (2 simultaneous connections + prior play/stop on Aux-in)
- Discrete, FLAT design
- Paintable
- 2x overall (FL101BT & FL501BT) and 2x water-resistant (HPRO650BT & HPRE650BT)

## **Smart Solutions in installing audio**

We have a cap to fit every size ... An **invisible cover (available from February)**

It's arrived! An inwall kit that allows you to conceal your speaker in the ceiling. The kit, or 'flush mount', ensures that the Intiimi loudspeaker's design grille is exactly level with the surface of your ceiling. In other words, they blend in with each other without being conspicuous. No more differences in height, no changes in relief, however small.

The flush mounts were developed for an easy and inconspicuous fit, which works. Available for all Intiimi models.

*The CKit, stronger than concrete? (available NOW)*

The 'smart' solution for acoustically unfriendly surroundings.

This kit generates outstanding audio quality in any concrete structure. Installed before the concrete is cast.

## **Smart solutions in Utility, a full range**

**U6, wireless power (available from April)**

The U6, with the U of utility – for indoor and outdoor use. In the workplace, at the campsite, in your student lodgings, at the swimming pool, or wherever.

The 6 embodies versatility: inbuilt FM radio, USB charger, SD reader, digital display, flexible antennae and, of course, the wireless Bluetooth connection. The double driver does the rest, for you and your

surroundings.

### **U3, digital power (available NOW)**

Originally, the U3 was intended to be a super-rugged site radio, but with its diversity of features, it has since become a waterproof jack-of-all-trades. AUX/MIC input, battery holder, 12 volt connection (cigarette lighter), input for headphones, and LED lighting, to name but a few. All of which has been assembled together in an especially powerful tuner

and speaker with a sublime reproduction of bass tones. Its robust design has been built to withstand a shock or two. For example, it can be used in the garden, by the swimming pool, during renovation work and on the campsite

### **Smart Solutions in multi-volume control (available now)**

The SVC6.2T (stereo volume control) - when connected to a 100V amplifier - allows you to create up to six different zones in terms of volume control. The handy dials on the front panel enable you to adjust or to switch off the volume in each of the

different zones. An extra 24V/DC input ensures priority for inactive zones. The style and the finishing of the SVC6.2T 19" model provides for the best possible integration in an 19" rack.
